Borehole Data Management Using RSLog
Thursday, August 22 | 11 AM – Noon | Zoom

REGISTER NOW

Learn About the Benefits of Managing Borehole Data Through RSLog
- Field data collection tools
- Log template design and customizations
- Cross-section design
- Use of AI and OCR to turn historic paper logs to RSLog boreholes

Biography
Alireza is the Senior Manager – Web Applications at Rocscience Inc. He has 25 years of consulting experience in seismic assessment and geotechnical design, with a specialized focus in engineering analysis. His sectors of extensive geotechnical practice include site characterization and seismic design including soil liquefaction analysis, site-specific response spectra analysis, pile design, slope stability and design of segmental and MSE walls, excavation and shoring design, and project management spanning over 1000+ projects. He has provided geotechnical engineering services ranging from small- to large-scale projects for institutional, commercial, transportation, and residential market sectors. In 2008, Alireza co-founded Novo Tech Software Ltd. and developed several computer programs (both desktop and cloud-based) for geotechnical engineering. In 2021, Novo Tech Software was acquired by Rocscience Inc. Over 1000 consulting engineering companies and universities across the world use tools developed by Novo Tech in their projects.
