

DWR BULLETIN 74 WELL STANDARDS UPDATE

TUESDAY, MAY 6 | 11:00 AM - 12:00 PM PACIFIC | VIRTUAL

REGISTER

JULIE HAAS, PE

Senior Engineer, Water Resources
California Department of Water Resources

Last updated in 1991, DWR Bulletin 74 sets the minimum standards for various types of wells in California and, significantly to our industry, even impacts grouting requirements for drilled holes. This summer, the draft of the new Well Standards will be released for public comment. It is important that we all pay attention to these standards as their application and enforcement can affect our projects throughout California.

Join this webinar to hear DWR Senior Engineer Julie Haas, PE, explain the current status of the draft of the new document and its genesis. She will also answer your questions.

Questions and concerns submitted in advance [HERE](#) will help guide the content of the presentation.

PDHs/CEUs will be provided to individuals who attend the full webinar.
