IN CALIFORNIA**

MEMBERS SAY

Being a member of CalGeo has been very beneficial to my professional growth as well as providing valuable information to my staff. The amount of continuing education that CalGeo is providing with convenient webinars and in-person meetings has allowed me and my staff to stay up on current practices, learn new methods, and learn about upcoming code changes that may affect our work.

I also enjoy the networking with fellow geoprofessionals that CalGeo facilitates, connecting with industry peers from across California and even beyond. The conferences are a great way to get continuing education and network. They are also tons of fun! I have met fellow engineers and geologists and also affiliate companies that I have made lasting relationships with for current and future projects.

CalGeo has been the single best thing I've done for my career and business in the last few years as it has plugged me into the pulse of our profession.

YVETTE WILSON, PE | PRINCIPAL ENGINEER | ROCK SOLID ENGINEERING

As an advocate for geoprofessional companies performing related services, CalGeo provides value for Construction Testing Services threefold. First, the loss prevention seminars presented by industry experts are educational and informative for our technical staff, discussing relevant topics related to construction material testing. This provides an additional avenue for technical training to field technicians. Second, the networking socials, workshops, and conferences provide an outlet to interact with other geoprofessionals both technically and socially. Lastly, CalGeo is an advocate for member firms in legislation and exposes us to the latest in cutting edge emerging technology and trends in the profession.

BRAD QUON, PE, GE | PRINCIPAL GEOTECHNICAL ENGINEER | CONSTRUCTION TESTING SERVICES

CalGeo does a remarkable job managing multiple missions in my view. Starting with keeping its members informed of technical geotechnical developments to providing a social environment for geoprofessionals to discuss non-technical subjects, CalGeo delivers value. As an affiliate member, I get to enjoy many aspects of what CalGeo provides in addition to gaining excellent exposure to the geotechnical consulting community and their projects.

ADAM KILLINGER, PE, GE | REGION ENGINEER | GEOPIER

The geotechnical industry in California is relatively small yet covers a lot of different geographic areas across the state.

CalGeo provides that important connection between those in the geoprofession, affiliates, students, agencies, etc., which keeps our industry strong and vibrant.

MICHAEL WATARI, PE, GE | PRESIDENT, PRINCIPAL ENGINEER | WALLACE-KUHL & ASSOCIATES

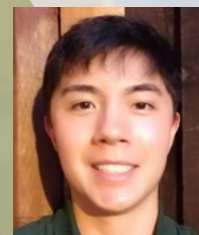

In our community of geoprofessionals, I believe organizations like CalGeo are critical to not only further our collective technical knowledge and advance the state of the practice, but to serve both as a unifying voice to advocate for our business professions and as a resource to our communities. From my time serving on CalGeo and similar boards, I have come to appreciate the strength of working with colleagues to overcome challenges and build a brighter future for the next generation of geotechnical engineers and geologists. I look forward to continue serving our CalGeo members to achieve our goals in the years to come.

R. TRAVIS DEANE, PE, GE | VICE PRESIDENT, LA OFFICE MANAGER | SHANNON & WILSON

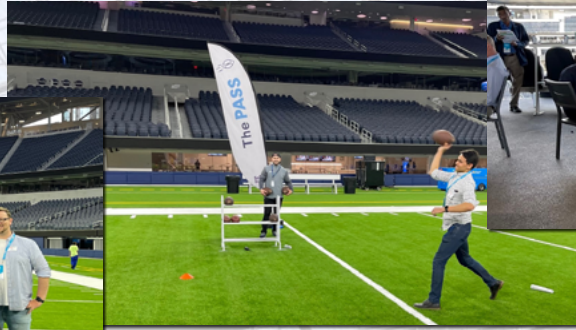

CalGeo stands at the forefront of devoting value to its student chapters through a portfolio of events, funds, and resources to support its early career professionals – students – while mentoring and inspiring its younger members. By design and expertise, CalGeo has recognized students by hosting educational and professional conferences, networking with leading experts, organizing enjoyable but strategic socials, gifting upstanding scholarships, rendering dream jobs and golden opportunities, and funding our student-run GeoWall competition team.

With a full suite of programs and resources, CalGeo provides students with invaluable knowledge and opportunities that they will need to jump into the industry, get on the right career path, and start shaping the future—and having fun doing it.

BRYAN DOCTO | PRESIDENT | CSUS CALGEO STUDENT CHAPTER
